

Starbucks Beverage Nutrition Analysis Dashboard

Business Requirements Document (BRD)

1. Project Overview

The Starbucks Beverage Nutrition Analysis Dashboard was developed to provide insights into the nutritional composition of Starbucks beverages. The dashboard enables stakeholders to analyze calories, sugar content, caffeine levels, and beverage distribution across categories, helping customers and business teams make data-driven decisions regarding product offerings and health-conscious consumption.

2. Business Problem

Consumers are becoming increasingly health-conscious and demand greater transparency regarding nutritional information.

Starbucks offers a wide range of beverages with varying nutritional values, making it difficult to quickly identify:

- High-calorie beverages
- High-sugar beverages
- Beverage categories with healthier options
- Overall nutritional trends across the menu

The business requires a centralized analytical solution to improve visibility into beverage nutrition metrics.

3. Business Objectives

The dashboard aims to:

- Provide a consolidated view of beverage nutrition data.
 - Analyze calorie distribution across beverage categories.
 - Monitor average sugar and caffeine levels.
 - Identify beverages with high nutritional impact.
 - Support healthier product recommendations.
 - Improve customer awareness regarding beverage choices.
-

4. Scope

In Scope

- Beverage nutritional analysis
- Calories analysis
- Sugar analysis
- Caffeine analysis
- Beverage category comparison
- Interactive filtering and exploration

Out of Scope

- Sales analysis
 - Customer behavior analysis
 - Revenue forecasting
 - Inventory management
-

5. Data Source

Dataset: Starbucks Beverage Nutrition Dataset

Primary attributes include:

- Beverage Name
 - Beverage Category
 - Calories
 - Sugar Content
 - Caffeine Content
 - Nutritional Measurements
-

6. Key Performance Indicators (KPIs)

Total Beverages

Measures the total number of beverages available within the dataset.

Business Value: Provides visibility into product portfolio size.

Average Calories

Measures average calorie count across all beverages.

Business Value: Helps evaluate overall nutritional profile.

Average Sugar

Measures average sugar content across beverages.

Business Value: Supports identification of healthier beverage options.

Average Caffeine

Measures average caffeine content.

Business Value: Provides insight into stimulant concentration across products.

7. Dashboard Visuals

Calories by Beverage Category

Visual Type: Area Chart

Purpose: Compare average calorie levels across beverage categories.

Business Insight: Identifies categories contributing the highest calorie intake.

Beverage Category Distribution

Visual Type: Donut Chart

Purpose: Display beverage composition by category.

Business Insight: Shows product concentration and category representation.

Average Calories by Category

Visual Type: Bar Chart

Purpose: Rank beverage categories based on calorie levels.

Business Insight: Highlights categories requiring nutritional optimization.

Beverage-Level Calorie Analysis

Visual Type: Column Chart

Purpose: Compare calorie values across individual beverages.

Business Insight: Identifies extreme high-calorie and low-calorie beverages.

8. User Requirements

Users should be able to:

- View overall nutrition KPIs.
 - Compare beverage categories.
 - Filter beverages dynamically.
 - Analyze calorie, sugar, and caffeine metrics.
 - Identify healthier beverage alternatives.
-

9. Expected Business Impact

Customer Benefits

- Improved nutritional awareness.
- Better beverage selection decisions.
- Easier identification of healthier options.

Business Benefits

- Enhanced product transparency.
 - Support for nutrition-focused marketing.
 - Insights for menu optimization.
 - Data-driven product development.
-

10. Success Metrics

The project is considered successful if stakeholders can:

- Analyze nutritional information in seconds.
 - Identify high-calorie beverages efficiently.
 - Compare beverage categories interactively.
 - Make informed decisions using dashboard insights.
-

11. Technology Stack

- Power BI
 - Power Query
 - DAX
 - Data Modeling
 - Interactive Dashboard Design
-

12. Conclusion

The Starbucks Beverage Nutrition Dashboard transforms raw nutritional data into actionable business insights. By providing visibility into calories, sugar, and caffeine content across beverage categories, the solution supports informed decision-making for both customers and business stakeholders while promoting data-driven nutritional awareness.
